Brain-Mind-Body Practice and Health Yi-Yuan Tang 2018-01-09 It is acknowledged that practice could induce rapid change or reorganization of the brain's cellular or neural networks as well as behaviors. Notably, practice relevant to mental or physical approach attracted great attention in this decade. It highlights profound

significance both for human evolution and individual development. Specifically, acquiring fine motor skills is a crucial premise for human being to evolve to modern human by using tools in one side. In the other side, numerous evidences indicated that motor learning involved in limb and trunks promotes the development of individual brain in anatomy and functions. Hence, motor learning is also tightly associated with developmental plasticity. These studies on brain-mind-body practice illuminate a promising way in promoting human brain health. This editorial covers wide range of brain-mind-body practice forms to summarize recent new findings and development from behavioral, physiological, neurobiological and psychological science approaches. In this research topic, we addressed recent findings from theoretical as well as experimental perspective including contributions under the following three headings: 1) intervention studies to investigate the positive effect of brain-mind-body practice on cognition and relevant brain mechanism. The intervention pattern consisted of short-term practice ranging from few hours to several weeks; 2) cross-sectional studies using expert-novice paradigm to explore the behavioral and neural system change induced by extensive brain-mind-body practice; 3) the mediators influence the relationship between practice and health outcomes and 4) new viewpoints on brain-mind-body practice from theoretical perspectives. Here we briefly highlight these articles aiming to provide a deep understanding for the association between practice, plasticity and health for readers. Additionally, it offers new insights for developing possible practice interventions for clinical treatment of neurological dysfunction or disorders.

This approach is based on the tradition of the Social Responsibility Research Network, which in its 15-year history has sought to broaden the discourse and to treat all research as inter-related and relevant to business. A Terrifying Grace Rob Yule 2017-04-28 Romance and sexual intimacy are among life's highest joys. How we handle our sexuality is an ultimate challenge, particularly in today's sexualised global culture. Rob Yule looks at a fascinating selection of romantic relationships from throughout Christian history, from Augustine, Abelard and Heloise, and the Luthers to Billy and Ruth Graham and Pope Saint John Paul II. Illustrating how challenging and far-from-straightforward the relationship of men and women is in real life, he draws many insights for relationships and marriage today. A Terrifying Grace explores the romantic relationships of leading Christians throughout history and how they handled sex and marriage. What were their relationships and marriages like? What did they believe or teach about sexuality and marriage? Did their marriages or celibate lives live up to their professed beliefs? How did they handle the joys, pains, temptations, and responsibilities of their intimate relationships, alongside their public life and witness? Even great Christians have struggled to handle their intimate relationships. We can learn much from them how to live with integrity in today's hypersexualised culture.

American Indian Education, 2nd Edition Jon Reyhner 2017-11-02 Before Europeans arrived in North America, Indigenous peoples spoke more than three hundred languages and followed almost as many distinct belief systems and lifeways. But in childrearing, the different Indian societies had certain practices in common—including training for survival and teaching tribal traditions. The history of American Indian education from colonial times to the present is a story of how Euro-Americans disrupted and suppressed these common cultural practices, and how Indians actively pursued and preserved them. American Indian Education recounts that history from the earliest missionary and government attempts to Christianize and “civilize” Indian children to the most recent efforts to revitalize Native cultures and return control of schools to Indigenous peoples. Extensive firsthand testimony from teachers and students offers unique insight into the varying experiences of Indian education. Historians and educators Jon Reyhner and Jeanne Eder begin by discussing Indian childrearing practices and the work of colonial missionaries in New France (Canada), New England, Mexico, and California, then conduct readers through the full array of government programs aimed at educating Indian children. From the passage of the Civilization Act of 1819 to the formation of the Bureau of Indian Affairs in 1824 and the establishment of Indian reservations and vocation-oriented boarding schools, the authors frame Native education through federal policy eras: treaties, removal, assimilation, reorganization, termination, and self-determination. Thoroughly updated for this second edition, American Indian Education is the most comprehensive single-volume account, useful for students, educators, historians, activists, and public servants interested in the history and efficacy of educational reforms past and present.

The Impact of Watching Violent Television Programs on Secondary School Children in Tanzania Watson Lupogo Masiba 2016-06-14 Violent television programs are highly preferred by children. They stimulate their emotions and increase curiosity about violence-related issues. This means that watching violent television programs has an impact upon their way of perceiving the world around them and acting in response to it. This study investigated the impacts of watching violent television programs on secondary school children in Tanzania. The specific objectives were: to examine children's accessibility to the TV, ascertain the types of violent TV programs and the time children spend watching them, determine the ways in which watching violent TV programs affects their academic performance, find out the impact of watching violent TV programs on their discipline, and examine the role of parents in addressing the impacts of watching violent TV programs upon their children. Results indicate that most secondary school children watch violent TV programs at home in the sitting rooms. They spend an average of three hours per day on weekdays, and seven-and-half hours on weekends, watching movies, music, drama, and informational programs that were identified as the most violent ones.

Obviously, spending lots of time watching violent TV programs decreases children's academic performance and discipline. This book is important because it discusses the parents' role in discouraging and limiting children from watching violent TV programs, and choosing appropriate TV programs for them.
